## I. Audience

This document is intended for business, technical and EDI personnel engaged in establishing an electronic connection with INTTRA for the purpose of receiving and processing Customer booking request messages from the INTTRA Portal via INTTRA's version of EDIFACT IFTMBF (D99B).

The following sections provide detail information regarding General Conventions, message flow, and message specifications to facilitate effective and efficient use of INTTRA's business transaction sets.

## II. Business Context

Carriers with an electronic connection to INTTRA implement the booking life cycle using the pair of messages, IFTMBF Customer booking request and the IFTMBC Carrier booking response. This Implementation Guide describes the IFTMBF transaction set supported by INTTRA.

Carriers may use the IFTMBF transaction set to receive New booking Requests, Amendments to existing bookings, and Booking Cancellations from INTTRA Customers. The IFTMBF message supports only INTTRA bookings, *viz.* bookings made by the customer using one of INTTRA's product channels.

## III. Booking Transaction Management

### A. Booking State Transitions

As a result of customer and carrier activity, bookings change state during the course of the booking cycle.

The following state matrices shows all possible transitions that can be attempted between states and categorizes them as valid, invalid, or ignored by INTTRA.

Valid state transitions are those transitions that are actively supported at INTTRA, and will lead to a new revision of the Booking, so long as the transaction passes all other strict validations on data.

Invalid state transitions will cause transactions to fail at INTTRA. Also, INTTRA will generate failure notifications for attempted 'Not Allowed' state transitions. Customers may subscribe to receive notifications of these and any other failures occurring during inbound message processing.

Transactions that attempt state transitions that are ignored by INTTRA will not be stored; however attempting ignored transitions will not cause transactions to fail (no error message will be generated). These ignored transactions would have no relevant impact to the state of a booking in the INTTRA portal.

The state matrix below applies to INTTRA Bookings that are made by Shippers/Forwarder or Carriers using the INTTRA Portal. Actions by Shippers/Forwarders result in a state of Requested, Amended or Cancelled. Actions by Carriers result in a state of Pending, Confirmed, Declined, or Replaced. When a new state is "proposed" (across the top) to an existing state (down the left column), the affect of such proposed state change is reflected in the cells (Allowed, Not Allowed or Ignored).

### C. Key Identifiers for Customer Booking Requests Outbound to the Carrier

This section describes the key identifiers provided by INTTRA on INTTRA booking transactions sent in IFTMBF messages outbound to the Carrier.

Customer Booking Requests are identified uniquely by the INTTRA Reference Number within the INTTRA Portal. This number is generated by INTTRA when a new Booking request is received, and will be used as the primary identifier for every subsequent transaction version created for the booking. Once assigned, the INTTRA Reference number will not be changed.

Carrier responses to un-split INTTRA bookings are matched to target bookings in the INTTRA Portal using the INTTRA Reference number. No other references on the booking will be used to find target INTTRA Bookings. Splits of INTTRA Bookings may be identified by either their Booking Number or INTTRA Reference. For transactions that split bookings, the INTTRA Reference number identifies the target (parent) booking that is being Split; otherwise it identifies the target INTTRA Booking to be updated by the transaction. See Appendix 6 in the Carrier IFTMBC Implementation Guide package for a detailed discussion of carrier initiated Splits.

The Booker party will always be provided on all Customer Booking request transactions. The Booker party on subsequent Customer transactions will match the Booker on the original Booking request.

<sup>1</sup> INTTRA generates failure notifications for not allowed state transitions.

<sup>2</sup> Replace/Replaced states are associated with Booking Split processing.

The Carrier Party will always be provided on all Customer Booking request transactions. The Carrier Party on subsequent Customer transactions will match the original carrier on the booking, except in the event of carrier brand change within group, in which case it will match the new carrier of record provided in the first Carrier response to the customer booking request. Customer transactions inbound to INTTRA may contain either the original carrier or the new carrier of record, however INTTRA will convert the original carrier to the new carrier before storing the booking, or sending it outbound to the new carrier of record.

Under the Shipper Managed Booking Number (SMBN) and Rapid Reservation (RR) programs, Bookings may have Carrier Booking Numbers prior to carrier confirmation, a function normally limited to carriers during the confirmation process.

SMBN, RR numbers will be provided only on Customer New Booking requests. Customers cannot change Booking Numbers on Amendments or Cancellations. If a Booking Number is provided on a carrier response to an INTTRA Booking, it will become the new active Booking Number for the Booking.

On IFTMBF transactions outbound to the Carrier, if a Booking Number is provided on a New Booking request, it will be either an SMBN or RR number. Subsequent Customer bookings transactions will provide the active Carrier Booking Number for the Booking, if any.

SMBN is authorized for specific carrier/shipper combinations. RR is authorized by carrier. Under SMBN, eligible shippers are issued a list of pre-authorized Carrier Booking Numbers that the shipper uses and maintains external to INTTRA. Under RR, INTTRA assigns Carrier Booking Numbers from a sequence authorized by a participating carrier (and optionally for specific regions and/or customer groups) and managed within INTTRA. If an SMBN has been provided by the Customer, INTTRA's RR feature will not be invoked, even if applicable.

Bookers cannot reuse SMBN numbers and RR numbers, even if they are present on terminated (declined or cancelled) or replaced transactions. Only the Carrier has the option to reuse Booking Numbers. When assigned to new bookings, SMBN numbers and RR numbers have to be unique across all bookings, active, inactive or replaced, for a particular carrier. Carrier assigned Booking Numbers will be unique across all active and replaced bookings for that carrier.

## IV. General Conventions

### A. Message Content

The INTTRA IFTMBF message set is designed so that Customers can provide exactly the information required for a particular business transaction. This allows implementation of various use cases, each with differing data requirements, without the constraints of generic validations. Specifically, INTTRA imposes few mandatory requirements. However, any data provided by the Customer to INTTRA and subsequently stored and sent by INTTRA to the Carrier, will be complete and valid according to the rules contained in this specification.

INTTRA has put in place specific recommendations for Customer booking transactions. *For maximum efficiency, Customer booking transactions should conform to the INTTRA recommendations for usage as described in the body of this Implementation Guide.* By tracking conformance with recommendations, INTTRA supports Customer data quality improvement initiatives and can report on transactional data quality measured according to the recommendations in this guide.

Note, however, that INTTRA does not enforce *recommended* usage. Any data that conforms with stated *requirements* and specific validations contained in this Implementation Guide will be accepted from the Customer. However, by putting in place explicit recommendations for use, INTTRA offers customers and carriers a specific guideline for streamlining their connections.

## **B. Data Management**

For IFTMBF transactions, INTTRA will only relay data provided by the customer, with the few exceptions noted below. INTTRA will not merge data from prior booking versions, while storing or sending outbound data to the Carrier.

Booking number and INTTRA Reference number will be provided from INTTRA's database, if they are not supplied by the Customer on an inbound booking transaction. Carrier aliases will be provided for coded locations and INTTRA registered parties, if present, as described in Section 6 (Standard Code Lists, Master Data Catalogues) of this document. For some standard codes, under Carrier preference control, literals may be supplied from INTTRA's database, if not provided by the Customer, as described in Section 6 of this document.

INTTRA will maintain a history of all the transactions in a booking's life cycle. Customer may provide a summary of changes which will be stored and sent to the Carrier. In addition, INTTRA detects and reports differences between subsequent versions based on sections of data present on the transactions being compared. INTTRA will not attempt to interpret the absence of sections of data as data deletion. Instead, INTTRA will report absent sections of data as 'not provided'. Since Difference Reporting (Diff) focuses on data that is provided, it follows that it is most efficient when transactions are used to only convey data that is pertinent to the business case.

## **C. Data Access**

Data access applies both to on-line access (Booking User Interface, result sets for Booking and Container Status Events Search, Reports) and access through subscribed notifications (Bookings and Container Status Events).

For INTTRA Bookings, only INTTRA registered parties provided by the Customer are eligible to access a booking through the INTTRA portal and receive related subscription notifications from INTTRA. Carriers may add parties to booking transactions or update parties already associated with INTTRA booking transactions but these activities will not affect access to the transaction with the following exceptions.

Subject to Customer authorization, a Carrier-supplied INTTRA registered Consignee or Main Notify Party will be considered for access privileges in the absence of a Consignee or Main Notify Party provided by the Customer.

For carrier initiated splits of INTTRA bookings, the split inherits the access parties and Customer provided transactional email notification recipients from the parent booking. Under Customer authorization, Carrier supplied INTTRA registered Consignee or Main Notify party will be considered for access privileges in the absence of a Consignee or Main Notify Party provided by the Customer. Other parties provided by the Carrier will not have access to the Booking.

Because the carrier acts as a proxy for the customer in the case of Standalone bookings, INTTRA registered parties provided by the carrier on a standalone booking will be eligible to access the booking through the INTTRA portal and receive related subscription notifications from INTTRA.

In addition to Portal access and subscribed notifications, INTTRA's transactional notification feature allows recipients to receive transactional booking data by email. The access rules for transactional notifications are as follows:

Transactional notification email addresses provided by the Customer for a Booking will receive notification of Carrier Confirm, Pending, Replace and Decline transactions and Customer Request, Amendments and Cancellations of the booking.

INTTRA also provides a transactional notification feature that allows carriers to send email notification of a particular IFTMBC transaction to any valid email address included by the carrier in the transaction. The scope of the email is purely transactional – subsequent changes to the Booking will not be automatically sent to these addresses. Carriers must specify the email address on every carrier transaction that they want notified. This feature is not available with Decline and Replace transactions.

Advisory charge Information provided on a Customer booking request as well as charge information confirmed by the Carrier using the IFTMBC transaction will be available only to the Booker and the Carrier of record on the transaction. No other party will have access to charge information, even if they have access to other data on the booking. Transactional Email notifications will not include information on charges.

## V. General Format Conventions

This section of the Implementation Guide describes INTTRA's support for special character handling and format validations applicable to email addresses provided in the IFTMBF transaction set. INTTRA's supported formats and usage conventions for numeric, date and temperature fields may be found in the detailed specification section of this Implementation Guide.

### A. Character Set Support

The character set supported by INTTRA is the UNOC UN/ECE level C, as defined in ISO-8859-1 character set (Hex 0x01 to 0xFF). The following subset of control characters may be deleted in the inbound message from the Customer by INTTRA to allow accurate processing by INTTRA and the carriers:

- Hex 0x01 through Hex 0x1F, **excluding Hex 0x0A (line feed) and 0x0D (carriage return)**.
- Hex 0x7F
- Hex 0x80 through Hex 0x9F

Characters outside of the range of Hex 0x01 to 0xFF are not supported by INTTRA and will not be sent. Character entities (Ex. &#39;) will not be used. Inbound Customer transactions containing these values will be failed. General entities (Ex. &amp;) are acceptable by INTTRA.

### B. Numeric Conventions

#### 1. General numeric conventions for decimal values

- Decimal will be represented using the dot ('.') e.g., 10455.12 or 45.8735
- Group separators will not be sent. e.g., 10,455.125 is invalid

The applicable precision varies by type of numeric data and is defined for each relevant element.

#### 2. Numeric elements representing counts will be supplied as positive whole numbers without group separators.

#### 3. Temperature elements will conform to the following rules:

- Temperature will contain 3 valid Numeric Digits, and may also contain a decimal and minus ('-') sign.
- Decimal Separator will be represented using a Dot ('.').
- Temperature values will not include group separators
- Maximum Precision for Temperature values is 1.
- Negative Temperature will include a Minus Sign ('-') in the first position of the element.
- Positive Temperature will be Unsigned.

### C. Email Format Conventions

INTTRA checks email addresses in incoming Customer transactions for format validity, using the following rules:

- Minimum length is 6 characters (Example: [a@b.cd](mailto:a@b.cd))
- Only one @ sign
- At least one dot ('.') after @ with at least one character in between
- Must have at least 2 characters after the last dot
- Allowed characters:
  - ASCII characters
  - Digits
  - -, -, @, .
- Disallowed characters:
  - All others not mentioned including , ; " ' / \, etc.

Email addresses provided by INTTRA to the Carrier in the outbound IFTMBF transaction will comply with the above rules.

#### **D. Date Format Conventions**

1. INTTRA's implementation includes date fields with the following formats:
  - Date alone, in the format CCYYMMDD
  - Date accompanied by time, in the format CCYYMMDDHHMM
2. When present, the time component is assumed to be in 24 hour format.
3. Unless explicitly stated in the IG to be considered as GMT/UTC, date/time values are considered to be local at the point of activity.
4. Unless explicitly stated otherwise, INTTRA requires all dates to be within 400 calendar days of the GMT date/time at which the transaction is validated.

### **VI. Standards Code Lists, Master Data Catalogues**

The following code lists are used by INTTRA to validate Customer booking request transactions. Outbound IFTMBF transactions to the Carrier will contain data that is validated against these lists.

#### **A. ISO Country Codes**

Country codes provided by INTTRA in the IFTMBF transaction will be valid 2-character ISO Country codes (ISO 3166 2A).

#### **B. ISO Currency Codes**

Currency Codes provided by INTTRA in the IFTMBF transaction will be valid 3-character ISO Currency codes (ISO 4217 3A).

#### **C. Package Types**

Package codes provided by INTTRA in the IFTMBF transaction will be valid according to the UN/ECE standard (UN ECE Recommendation 21, Release 4). A package description provided by the Customer will be sent to the Carrier. If a package code is supplied without any package description literals, INTTRA may send literals from its master tables, under preference control by the Carrier.

A complete list of supported package types is issued as a supplement to this Implementation Guide.

## D. ISO Container Codes

INTTRA supports a specific list of ISO Container codes. Incoming container types will be validated strictly against this list of ISO Container codes. INTTRA stores Container codes as received on the inbound transaction.

In the Booking Link 1.0 portal environment the individual ISO Container codes were associated to a grouping called the “INTTRA Equivalent To code”. In the Booking Link 2.0 portal environment, the ‘New’ ISO Standard Size type Group Codes (ISO 6346 01/1996) will be used instead of Equivalent To codes. Container ISO codes may be converted to ISO Group codes when Booking 2.0 transactions are displayed on INTTRA Act or INTTRA Desktop and prior to their transmission under Customer or Carrier preference control.

In addition, the ISO Container code lists are used by INTTRA to identify equipment types for which controlled settings may be provided. These fall into two sub categories, *viz.* reefer equipment, and what INTTRA refers to as “hybrid equipment”. INTTRA’s definition of hybrid equipment is a container that is not a defined “reefer” container, but may include temperature control. Reefer containers are by definition controlled equipment, and must be accompanied with controlled settings, or indicated as non-operative. Hybrid containers may be used as standard or controlled equipment, and hence may be provided with or without controlled settings. A common example of hybrid equipment is a Tank container, which may or may not have control settings.

A complete list of ISO Group codes and ISO Container type codes supported in Booking 2.0 along with the sub-categorization of hybrid and reefer equipment is issued as a supplement to this Implementation Guide.

## E. Coded Locations

INTTRA recommends that Customers use UN Location codes for all locations provided. This eliminates ambiguity and facilitates effective change detection and reporting. Customers are also advised to provide a clear, consistent, text description for all locations. In the event that it is not possible or practical to provide codes for certain locations INTTRA recommends that Customers provide a clear location name in lieu of a code, as well as country code and/or country name, and subdivision code/name if applicable. This will help partners identify the location without ambiguity.

Any coded location provided by INTTRA in the IFTMBF transaction outbound to the Carrier will be valid according to INTTRA’s master location data. INTTRA will not make any attempt to resolve free text literals provided by the Customer to coded geographies, or to reconcile coded information with information supplied in the literals.

In outbound transactions, recipient alias will be supplied for coded geographies for which the recipient has established aliases. When there is no recipient alias, the UNLOC code will be sent for coded geographies.

Any location literals provided by the customer will be sent to the carrier. If a coded geography is supplied without any location literals, INTTRA may send literals from its master tables in the outbound message, under preference control by the carrier.

## F. Coded Parties

When parties are provided on Customer booking transactions, INTTRA recommends that they be coded by one of the 4 supported schemes.

1. INTTRA company ID; must be a valid INTTRA-assigned company ID and indicates a company registered with INTTRA.
2. Customer Alias; must resolve to a valid INTTRA-assigned company ID and indicates a company registered with INTTRA.
3. DUNS number; not validated or resolved by INTTRA.
4. Pass-through Code; not validated or resolved by INTTRA.

Messages with invalid values for codes subject to strict validation will be failed. INTTRA will not make any attempt to resolve free text literals provided by the Customer to coded parties, or to reconcile coded information with information supplied in the literals.

In outbound transactions, recipient alias will be supplied for registered parties for which the recipient has established aliases. When there is no recipient alias, the INTTRA ID will be supplied for registered parties. DUNS number and Pass-Through Code will be sent exactly as received from the Customer.

When un-coded parties are provided, INTTRA recommends that the customers provide ISO Country code, and postal code in structured fields, in addition to the full name and address, as this will further reduce ambiguity in party identification.

Any party literals provided by the Customer will be sent to the Carrier. If an INTTRA registered coded party is supplied without any party literals, INTTRA may send literals from its master tables, under preference control by the Carrier.

### **G. Additional recommended code lists**

Additionally, INTTRA recommends the use of the following standard code lists when applicable. Values in the Customer booking transaction will not be validated against these code lists; however INTTRA recommends that Customers provide valid data from the standard lists.

- Transport Operator codes (SCAC codes, Truck Operator codes)
- Lloyd's vessel codes
- DUNS Numbers
- Schedule B Numbers
- WCO 6 digit Harmonized Tariff Schedule numbers (WCO HSC 6 Digit Harmonized Commodity Description)
- UNDG Numbers for Hazardous goods
- IMO Codes for Hazardous goods
- IBC Package Codes

## VII. Message Usage Summary

### A. Customer New Booking Requests

The IFTMBF message is designed to accommodate as much information as needed for a particular business case. INTTRA recommends its customers to conform to INTTRA's booking request data requirements and recommendations that will increase Carrier efficiency in processing INTTRA booking requests and providing a prompt response to the booking. The IFTMBF message also caters for a 'cumulative' request. In this case, the customer can provide an initial new booking request with minimal required information and additional operational detail as it becomes available. This may be appropriate for advanced bookings, or recurring bookings made in advance, for which more details become available later in the booking cycle.

The detailed use cases in Appendix 1 at the end of the message specification describe how Customers can use the various segments of the IFTMBF to represent specific business data, with illustrative examples.

### B. Customer Amendments

The IFTMBF message allows customers to amend bookings only if they have been previously responded to by the carrier. Customers may hence amend information on a confirmed booking, or a booking in Pending state. INTTRA requires customers to provide the same minimum set of data for amendments as the minimum data set required for successful processing of new booking requests.

Customers may also amend bookings split by the Carrier. Please see Appendix 6 (Booking Split Conventions) of the Customer Inbound Implementation Guide for a detailed discussion of Amendment processing related to split conditions.

### C. Customer Booking Cancellation

Customers may cancel bookings at any stage in the Booking life cycle, before or after the carrier has responded to the latest customer transaction requesting a new booking, or changes to an amended booking.

Customers may also cancel bookings split by the Carrier. Please see Appendix 6 (Booking Split Conventions) of this Implementation Guide for a detailed discussion of Cancellation processing related to split conditions.

In the interests of streamlining the processing of terminating transactions INTTRA only processes transaction identifiers, transaction contact, transaction assembled date time and customer comments on a Customer Cancellation. Transaction identifiers include Customer Shipment Id, Booker Party, INTTRA reference, Carrier Party, & Booking number. All other data provided in the Cancellation transaction is ignored by INTTRA. In the same vein, INTTRA ignores carrier or customer terminations to already terminated Bookings.

Note that customers cannot add or change transaction email notification recipients in a terminating transaction. However, any transaction email notification recipients provided previously by the Customer will be notified on Customer Cancellation.

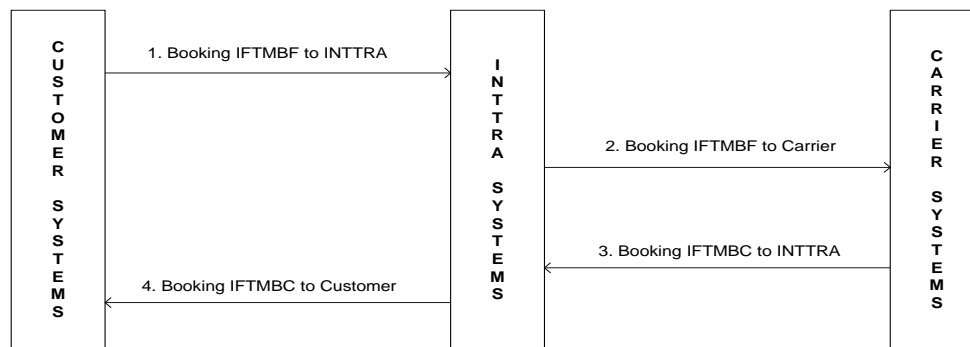

### D. Standalone bookings

INTTRA defines a "standalone booking" as a booking in the INTTRA portal where the Booking Request was not initiated via the INTTRA portal through any one of the INTTRA customer channels (INTTRA Link, INTTRA Act or INTTRA Desktop). This means that the customer initiated the booking request with the carrier through a direct (or non-INTTRA channel) and the confirmation was then sent to INTTRA by the carrier. These bookings are also referred to as "non-INTTRA bookings".

Customers will not be able to use the INTTRA portal to amend or cancel the standalone booking. Carriers will not receive booking amendments or cancellations for standalone bookings from INTTRA.

## VIII. Message Flow

1. Customer sends to INTTRA an IFTMBF Booking (Request, Amendment, Cancellation) Transaction per INTTRA Message Specification via communication methods detailed in INTTRA Connectivity Guide.
2. INTTRA's proprietary Portal Application, INTTRAWorks, performs message and content validation then issues the Booking (Request, Amendment, Cancellation) to the destination carrier via INTTRA IFTMBF.
3. Carrier system issues IFTMBC Booking (Confirmation, Decline, Replace, Split) Transaction to INTTRA.
4. INTTRA system issues IFTMBC Booking (Confirmation, Decline, Replace, Split) Transaction to the customer.

It should be noted that all errors are handled by INTTRA's global EDI support and monitoring team, who utilize a comprehensive systems and message handling monitoring system.

## IX. IFTMBF Message Revision History

### A. CHANGES from version 1.0 (February 28, 2011) to version 1.1 (August 16, 2017)

Group 19-DIM-EQN Increased the group count from 1 to 99  
 0890 DIM: Revised notes for Dimensions of transportable units for LCL shipments.  
 0890 DIM-C211,6411 added codes "INH" inches and "CMT" Centimeters.  
 0900 EQN: Activated this segment.

### B. CHANGES from IFTMBF D99B to version 1.0 (February 28, 2011)

0060 TSR C233:7273 - Enabled to indicate FCL or LCL shipments  
 0730 TMP and 0800 PCD - Enabled to support cargo temperature and humidity reefer settings for LCL shipments  
 0790 FTX - Updated Comment Notes and expanded description for composite element C107.  
 0790 FTX, 4451 - Added text subject code qualifier; accepted value "AEB"  
 0790 FTX, C107:4441- Added free text value code; accepted value "ECA", "GEN", "HUM", "VTC" and "VTO"  
 0790 FTX, C107:1131 - Added code list identification code; accepted value "130"  
 0860 MEA - Updated Comment Notes  
 0860 MEA, C502:6313 - Added measurement attribute code; accepted value: "AAS", "ZC", "ZN" and "ZO"  
 0860 MEA, C502:6411 - Updated Supplied values for AirFlow and Atmosphere measurements

**Notes:** RFF+ANT:CONSGN-112098

When BN reference is sent in an original booking request (0020 BGM 1225 = 9), it represents a Shipper Managed booking number or Rapid Reservation number.

When BN reference is sent in a change booking (0020 BGM 1225 = 4) it will be the booking number as supplied by the carrier in the confirmation.

INTTRA will transmit only one of AFG (Tariff Number), AGE (Outbound Booking agent reference), BN (Booking Number), CT (Contract Number)/LI (Contract Line Item Number) and EX (Export License).

Multiple occurrences of all other references may be sent as follows: Up to 30 occurrences of 'BM' (Bill of Lading Number) and any combination of AGB (Contract Party Reference); AKG (Vehicle Identification Number); ANT (Consignee's Reference); FF (Freight Forwarders Reference); ON (Purchase Order Number) and SI (Shippers Reference Number), up to 60 occurrences.

AFG (Tariff Number) and CT (Contract Reference Number) are mutually exclusive.

LI (Contract Line Item Number) will only be transmitted if CT (Contract Number) is provided.

INTTRA RECOMMENDS that AFG (Tariff Number) or CT (Contract Number) be provided for Booking Request (0020 BGM 1225 = 9) and Amendment (0020 BGM 1225 =4) transactions.

Any reference sent here will not appear at any other level in this transaction.

For Cancellation (0020 BGM 1225 = 1) transactions received from the customer only Booking Number (C506, 1153 = BN) will be processed. All others will be ignored.

INTTRA will always transmit CA (Carrier) and ZZZ (Booking Party).

ZZZ (Booking party) and CA (Carrier) will be INTTRA registered parties.

Either INTTRA registered CZ (Shipper) or INTTRA registered FW (Forwarder) must be provided in Booking Request (0020 BGM 1225 = 9) and Amendment (0020 BGM 1225 = 4) transactions.

Either Party Code (C082, 3039) or Name (C058, 3124) will always be provided.

INTTRA RECOMMENDS customers send Postal Id (3251) and Country code (3207) when party is not coded.

INTTRA RECOMMENDS customers only provide FP (Freight Payer) party type when none of the other party types are appropriate for handling of charges.

Only one of each party type will be sent per booking.

INTTRA will not attempt to derive party codes if not provided by the customer.

With respect to name and address, INTTRA will provide what the customer sends.

For non-INTTRA parties, details such as name and address will be sent to the Carrier if provided in the Booking transaction. For INTTRA registered parties, if name and/or address are not sent in the Booking transaction, name and address from INTTRA's database will be provided at Carrier's request (carrier preference setting).

Only ZZZ (Booking Party) and CA (Carrier) will be processed in Booking Cancellation (0020 BGM 1225 = 1) transactions.

**Group:** Segment Group 14 (Charge Payment Instructions)      Conditional (Optional)  
**Level:** 2  
**Usage:** Mandatory  
**Max Use:** 1  
**Purpose:** A segment to identify default charge methodology.  
**Notes:** CPI+4++P

Information about charges is advisory only. Customers are advised that acknowledgement of receipt of charge information and confirmation of bookings with charge information does not constitute carrier acceptance of the charges in any form.

Access to Charge information (CPI, LOC, and MOA) will be limited to Carrier (0470 NAD 3035 = CA) and Booking party (0470 NAD 3035 = ZZZ).

Charges indicated to be settled by party identified in the preceding NAD segment.

Only one occurrence of each charge type will be sent per transaction.

INTTRA RECOMMENDS customers only send charge type 11 (Origin haulage charges) when haulage arrangement code (TMD 8341) is requesting carrier haulage at export (CC or CM) and only send charge type 5 (Destination haulage charges) when haulage arrangement code (TMD 8341) is requesting carrier haulage at import (CC or MC).

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

This segment is not supported in the IFTMBC Transaction.

This segment is used to identify the location at which responsible party (identified in the preceding NAD segment) will settle indicated charge.

Either Location code (C517, 3225) or Location name (C517, 3224) will always be provided.

INTTRA RECOMMENDS customers send country id (C519, 3223) or country name (C519, 3222) and state/province information (C553,3232) for any uncoded locations.

With respect to location literals, INTTRA will provide what the customer sent.

If location literals are not sent in the Booking transaction for a coded location, literals from INTTRA's database will be provided at Carrier's request (carrier preference setting).

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

This segment is not supported in the IFTMBC Transaction.

**Segment:** **GID** Goods Item Details  
**Position:** 0710 (Trigger Segment)  
**Group:** Segment Group 16 (Goods Item Details) Conditional (Optional)  
**Level:** 1  
**Usage:** Mandatory  
**Max Use:** 1  
**Purpose:** A segment to identify a goods item for which transport is undertaken. A goods item can be identified by up to three levels of packaging.  
**Notes:** GID+1+2:CT:67:6:CARTON  
 GID+1

This segment is MANDATORY for Booking Request (0020 BGM 1225 = 9) and Amendment (0020 BGM 1225 = 4) transactions.

The GID segment is used to report commodity level packaging.

INTTRA RECOMMENDS to customer that Pallets are not an acceptable packaging type.

INTTRA RECOMMENDS customers send only outer pack information for non-dangerous cargo.

INTTRA RECOMMENDS customers send inner and inner-inner pack for dangerous cargo only when there are multiple DG cargoes in the outer pack.

INTTRA will always provide the pack level details in a vertical format regardless of how it was received from the customer.

The total number of Pack Composites will not exceed 999 per transaction.

Notes:

- A GID Set is a group of GID lines identified by a unique GID Sequence number (element 1496)
- Each new GID set will begin with an Outer Pack Composite.
- Only one Outer Pack Composite will be sent per GID set.
- Every C213 Pack Composite provided will have either a valid package code, or package description, as well as the number of packages.
- An Outer Pack Composite must precede an Inner Pack Composite and an Inner Pack Composite must precede an Inner-Inner Pack Composite.
- At Carriers request (Carrier preference setting), INTTRA will resolve package description (if not provided by customer) systematically using valid package code (C213,7065) and send package description from INTTRA database to the Carrier.
- For hazardous commodity, package type code or package description and number of packages must be provided.
- Number of Packages must be a whole number greater than zero.
- INTTRA allows for a GID segment to be sent without package code/package description and number of packages (i.e. allow GID+1, GID+2) but if multiple package levels are sent, the package code or description and number of packages must be provided for all package level.
- If package code or package description is provided then number of package must also be provided.

Recommended GID construct:

GID+1+2:CR:67:6:CRATES (Outer Pack Composite)  
 PIA+5+HARMONIZED CODE:HS

FTX+AAA+++BALL BEARINGS (commodity description)  
 MEA+AAE+G+KGM:7000 (weight of outer pack)  
 SGP+01+2 (number of outer packages in a container)

See GID Conventions in the Carrier IFTMBF Appendix for detailed instructions and examples of Goods Item Detail format.

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions received from the customer.

INTTRA RECOMMENDS that customers provide at least one of Commodity Description or Commodity Id (as defined in the PIA segment) for each outer GID.

INTTRA RECOMMENDS that Commodity Description be limited to the Outer Pack level for non-dangerous goods.

Only 1 segment per GID loop will be sent with Text Subject Code Qualifier of AAA.

Only 2 segments per GID loop will be set with Text Subject Code Qualifier of CUS each containing only 1 of Free Text Value Code CCN or UCN.

Text subject CUS may appear at other levels in the transaction. CCN and UCN will only appear at one level in the transaction.

Only 5 segments per GID loop will be sent with Text Subject Code Qualifier of AEB; 1 with Free Text Value Code not populated and 4 each containing only 1 of Free text Value Code ECA, GEN, HUM, and (VTC or VTO). Text subject AEB (temperature control instructions) will only be sent on LCL (0060 TSR C233, 7273 = 3) transactions and is only applicable to outer packaging level.

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

**TEXT REFERENCE**

**C 1**

Coded reference to a standard text and its source.

GEN (genset required), ECA (equipment controlled atmosphere), HUM (humidity) will only be sent when a set temperature has been supplied (0730 TMP C239, 6246) in the goods item details group (GID loop).

INTTRA RECOMMENDS to customers when ECA (equipment controlled atmosphere flag) is provided that customers send carbon dioxide, nitrogen, and oxygen gas measurements (0860 MEA C502, 6313 = ZC, ZN and ZO).

INTTRA RECOMMENDS to customers when HUM (humidity flag) is provided that customers send humidity measurement (0800 PCD C501, 5482).

INTTRA RECOMMENDS to customers when VTO (vent open flag) is provided that customers send air flow measurement (0860 MEA C502, 6313 = AAS).

VTC (vent closed) and VTO (vent open) are mutually exclusive.

ECA (equipment controlled atmosphere) and VTO (vent open) are mutually exclusive.

**4441 Free text value code M an..17**

Only one Volume and Weight Measurement will be sent per GID loop.

INTTRA RECOMMENDS that Customers provide at a minimum one of the following weight measurements in Booking Request (0020 BGM 1225 = 9) and Amendment (0020 BGM 1225 = 4) transactions;

- Outer Pack GID commodity weight (provided in this segment).
- SGP container weight (1100 MEA segment).
- Container weight (1300 MEA segment)

INTTRA RECOMMENDS that customers provide Inner and Inner-Inner level measurements in Booking transactions with Dangerous cargo at those levels.

Airflow and Atmosphere settings will only be sent on LCL (0060 TSR C233, 7273 = 3) transactions and is only applicable to outer packaging level.

INTTRA RECOMMENDS that customers provide oxygen, nitrogen, carbon dioxide measurements when Equipment Controlled Atmosphere flag is sent (GID/FTX 4451 = AEB) and (GID/FTX C107, 4441 = ECA).

INTTRA RECOMMENDS that customers provide Air Flow measurement when Vent Open flag is sent (GID/FTX 4451 = AEB and GID/FTX C107, 4441 = VTO).

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

All weight, volume, airflow and atmosphere (oxygen, nitrogen, carbon dioxide) values will conform to below rules:

- Decimal will be represented using the dot ('.').

**Notes:** DIM+2+MTR:16.764:12.192:6.096

The information in this segment represents the dimensions of the OOG commodity for full container load bookings.

For LCL shipments this segment will be used to report the dimensions of each transportable unit of commodity (e.g. pallets, cartons etc.). INTTRA recommends this be sent for LCL shipments.

INTTRA REQUIRES that customers send this segment at the outer pack level only.

INTTRA RECOMMENDS customer send this segment only if cargo is OOG or LCL shipments.

INTTRA RECOMMENDS that customers send the OOG flag in the GDS segment when Out of Gauge cargo is indicated in this segment.

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

All numeric values will conform to below rules:

 SGP+01+24

This segment is not supported in the IFTMBC Transaction.

The SGP segment is used to indicate the portion of a commodity that is loaded in a specific container.

If supplied, container details (1270 EQD) will also be sent.

This segment will only be sent at GID set Outer Pack Composite.

If SGP is sent it will be sent for every GID set.

INTTRA RECOMMENDS that Customers provide SGP information for Booking Request (0020 BGM 1225 = 9) and Amendment (0020 BGM 1225 = 4) transactions.

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

Notes:

- in the case of Split Goods (same commodity within multiple containers), the SGP segment will repeat within the GID set for each container.
- Each distinct container number listed in an SGP (composite element C237, 8260) will have a matching container number in an EQD segment.

INTTRA RECOMMENDS that customers send inner and inner-inner packing details for dangerous commodities only when multiple dangerous commodities exist in the Outer pack.

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

Note:

- In case more than one IMO code applies, an additional 2 may be sent in the DGS segment (C236,8246).

Temperature is stored at INTTRA as provided by the customer.

Flash Point Temperature will conform to below rules:

- Decimal will be represented using the dot ('.').
- Temperature values will not include group separators.
- Temperature will contain 3 valid Numeric Digits, and may also contain a decimal and minus sign ('-').
- Maximum Precision of Temperature is 1.
- Negative Temperature will include a Minus sign ('-') and it will be in the first position of the element.
- Positive Temperature will be Unsigned.

This segment is not supported in the IFTMBC Transaction.

This segment may only be sent when DGS segment is filled.

Container number (C237,8260) will have been referenced in the preceding GID/SGP segment in which the dangerous commodity appears.

The SGP segment is used to indicate the specific container in which a specific quantity of dangerous commodity is loaded.

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

Notes:

- in the case of Split Goods (same dangerous commodity within multiple containers), the SGP segment will repeat within the DGS group for each container.
- Each distinct container number listed in an SGP (composite element C237 8260) will have a matching container number in an EQD segment.

Weight and/or volume of dangerous commodity specified in DGS segment that is loaded in container referenced in the DGS/SGP segment.

Only one Volume and Weight measurement will be transmitted per SGP loop.

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

Weight and volume values must conform to below rules:

- Decimal will be represented using the dot ('.').
- Group separators will not be sent.

1. Weight: Maximum 3 digits of precision allowed:  
 examples: valid - "1000.123" invalid - "1,000.123", "1.000,123"

Net weight and net volume will be total measurements for all container(s) in the EQD group. Humidity, Airflow and Atmosphere settings apply to each container in the EQD segment.

INTTRA RECOMMENDS that Customers provide at a minimum one of the following weight measurements in Booking Request (0020 BGM 1225 = 9) and Amendment (0020 BGM 1225 = 4) transactions;

- Outer Pack GID commodity weight (0860 MEA segment).
- SGP container weight (1100 MEA segment).
- Container weight (provided in this segment).

Only one measurement each of Volume, Weight, Humidity, Airflow, Carbon Dioxide Level, Nitrogen Level and Oxygen Level will be sent per EQD loop.

INTTRA RECOMMENDS that customers provide oxygen, nitrogen, carbon dioxide measurements when Equipment Controlled Atmosphere flag is sent (EQD/FTX 4451 = AEB) and (EQD/FTX C107, 4441 = ECA).

INTTRA RECOMMENDS that customers provide Humidity measurement when Humidity flag is sent (EQD/FTX 4451 = AEB and EQD/FTX C107, 4441 = HUM).

INTTRA RECOMMENDS that customers provide Air Flow measurement when Vent Open flag is sent (EQD/FTX 4451 = AEB and EQD/FTX C107, 4441 = VTO).

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

All weight, volume, air flow, humidity and atmosphere (oxygen, nitrogen, carbon dioxide) values will conform to below rules:

- Decimal will be represented using the dot ('.').
- Group separators will not be sent.

1. Air flow, Humidity and Atmosphere: Maximum 2 digits of precision allowed:  
 examples: valid - "1000.12" invalid - "1,000.12", "1.000,12"

**Segment:** **TMP** Temperature  
**Position:** 1340  
**Group:** Segment Group 32 (Equipment Details) Conditional (Optional)  
**Level:** 2  
**Usage:** Conditional (Optional)  
**Max Use:** 1  
**Purpose:** A segment to specify a temperature setting for the equipment.  
**Notes:** TMP+2+02.3:CEL

INTTRA RECOMMENDS that set temperature (C239, 6411) be the same for all TMP segments in the transaction. However, if different temperatures are sent in the TMP segments, transaction will be processed provided that the carrier is configured to accept multiple temperatures. If the carrier is not configured to accept multiple temperature settings, the transaction will be failed.

This segment will always be provided for reefer containers specifically identified by equipment type code (EQD, C224, 8155) if the temperature control unit is to be active.

This segment may also be provided for hybrid containers (e.g. tanks) specifically identified by equipment type code (EQD C224, 8155) if the temperature control unit is to be active.

If number of containers (EQN, C523, 6350) is greater than 1, the information in this segment applies to all equipment in the group.

INTTRA RECOMMENDS customers not mix active and non-active settings for reefer or hybrid (.e.g. tanks) containers on a single booking.

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

Temperature is stored at INTTRA as provided by the customer.

See appendix 4 for detailed instructions and examples of Controlled Equipment Detail format.

Set Temperature will conform to below rules:

- Decimal will be represented using the dot ('.').
- Temperature values will not include group separators.
- Temperature will contain 3 valid Numeric Digits, and may also contain a decimal and minus sign ('-').
- Maximum Precision of Temperature is 1.
- Negative Temperature will include a Minus sign ('-') and it will be in the first position of the element.
- Positive Temperature will be Unsigned.

Valid examples:

005, -005, -05.5, 55.2, 45.0

Invalid examples:

Only 1 segment per EQD loop will be sent with Text Subject Code Qualifier of AGK.

Only 10 segments per EQD loop will be sent with Text Subject Code Qualifier of AEB; 1 with Free Text Value Code not populated and 9 each containing only 1 of Free text Value Code ECA, FRZ, GEN, HUM, ICP, ICT, NTP, TVA and (VTC or VTO).

Only 2 segments per EQD loop will be sent with Text Subject Code Qualifier of CUS containing 1 of Free Text Value Code CCN or UCN.

Only 1 segment per EQD loop will be sent with Text Subject Code Qualifier of HAN containing 1 of Free Text Value Code SAD or SBD.

Only 6 segments per EQD loop will be sent with Text Subject Code Qualifier of SSR each containing only 1 of Free Text Value Code CLN, FGE, FMG, GOH, HTE or SWP.

Text subject AEB (temperature control instructions) will only be sent when a reefer or hybrid (e.g. tank) container type is requested (1270 EQD C224, 8155) and a set temperature has been supplied (1340 TMP C239, 6246) in the container group (EQD loop).

Text subject CUS may appear at other levels in the transaction. CCN and UCN will only appear at one level of the transaction.

If number of containers (EQN, C523, 6350) is greater than 1, the information in this segment applies to all containers in the group.

INTTRA RECOMMENDS customers supply EV (subcontractor, 1380 NAD) information when Super Freezer Service or In-Transit Cold Sterilization is requested and

is to be supplied by someone other than the ocean carrier.

This segment will not be processed if received in Cancellation (0020 BGM 1225 = 1) transactions from the customer.

## **XI. Appendix 1 - IFTMBF Use Cases**

This appendix shows carriers how to process the IFTMBF message set to extract information on Customer booking requests, amendments, and cancellations, under different use case conditions.

### **A. Customer AMS Filing**

The customer may indicate that they are responsible for AMS filing and provide the SCAC Code under which AMS filing will occur as shown in the Customer Request below.

```
FTX+CCI++AMS:110:ZZZ
FTX+CCI++NVO:110:ZZZ+NVOCC_SCAC
```

This information may be provided on the first booking request, or in subsequent amendments. Customers are advised that there is no provision for changing this declaration once it is provided.

### **B. Requested Booking Office**

Customers may indicate that a particular Carrier booking office should handle a booking by using the header location segment as shown below.

```
LOC+197+BEANR:181:6:ANTWERP
```

Customers are advised to provide the booking office when it is at a location other than the location at which the cargo will be loaded. Customers must provide a coded location for a requested booking office.

### **C. Requested Routing and Haulage Service Arrangement**

Customers are required to provide the following information on a new booking request and in a booking amendment:

- a valid, coded Place of Receipt in the header LOC
- a valid, coded Place of Delivery in the header LOC
- at least one of
  - Departure date/time, earliest at Place of Receipt
  - Delivery date/time, latest at Place of Delivery
  - Vessel name (or Lloyd's code) and Voyage (both sent in same TDT main-carriage segment).
  - Haulage Service Arrangement code, which must be provided and must be the same for every Equipment Group on the booking

All of this information is also required for an amendment.

Move Type is also required in a Booking Request and in Amendment

### **D. Specifying Transshipment Location Preferences**

Customers may indicate requested Transshipment Ports as follows, in the Header LOC segment (IFTMBF Position 0110):

```
LOC+75+NLRTM:181:6:ROTTERDAM+NL:162:5
```

Customers may indicate to Carriers that they prefer their Booking NOT be transshipped via particular locations, as follows, in the Header LOC segment:

LOC+74+OMSLL:181:6:SALALAH+OM:162:5  
LOC+74+SOMGQ:181:6:MOGADISHU+:::SOMALIA

### E. Flagging Special Cargo

INTTRA recommends that Customers provide a header level indicator when requesting bookings for special Cargo. Special Cargo categories defined are: Out of Gauge, Controlled Equipment, Hazardous Cargo and Environmental Pollutant.

GDS+5	Out Of Gauge
GDS+14	Temperature Controlled
GDS+11	Hazardous
GDS+15	Environmental Pollutant

### F. Charge Information Provided by the Customer

Customers may provide advisory information about charges in a Booking request or amendment. These advisory charge details are provided under the party responsible for settlement and will contain payment arrangements and may include payment location as shown in the Customer Request example below.

```
NAD+CZ+3049870:160:87+SHIPPER NAME
CPI+11++P
LOC+57+USNYC:181:6:NEW YORK
```

In addition, INTTRA provides a special party type, the Freight Payer Party, which may be used to send information about any charges that are not associated with any of the other parties on the Booking. Carriers will always receive advisory information about one or more charges when they receive a Freight Payer Party. The following message sample shows the provision of charges with a Freight Payer Party.

```
NAD+FP+442566:160:87+FREIGHT PAYER NAME
CPI+4++P
LOC+57+USEWR:181:6:ELIZABETH
```

**NOTE:** Carrier confirmation of a Booking Request or Amendment containing advisory charge information does not constitute acceptance of the charges. Similarly, carrier acknowledgement, via the TCC segment, of receipt of advisory charge information does not constitute acceptance of the charge information provided.

### G. Customer Provided Transport Plan Details

INTTRA recommends that customers do not typically need to provide a transport plan. However, if the customer provides a plan, INTTRA recommends that it be consistent with the mandatory Place of Receipt and Place of Delivery and that it include at least one complete main carriage leg.

Lack of a main leg, or inconsistencies between the Place of Receipt and Place of Delivery specified in the header LOC and the associated Start and End locations in the Transport Plan will not cause a Customer transaction to fail; however, these inconsistencies will be tracked by INTTRA, as a part of Customer Data Quality Improvement initiatives.

If a transport plan is updated in an Amendment, INTTRA recommends that the entire plan be resent.

### H. Customer Specified Equipment Details

Customers are required to provide Equipment details for a New Booking Request and for Booking Amendments.

## I. Customer Provision of Container Numbers

Customers may use logical or actual container numbers to link Split Goods Placement information to requested equipment, as shown in the examples below. Only one type of number may be provided per container and only one occurrence of a given container number will occur in the Equipment section of a Booking.

## J. Requested Merchant Haulage details

Customers provide haulage details for each equipment group specified and indicate haulage arrangements requested for the Export and Import sides of a shipment. The example below shows Merchant haulage at each side and indicates the desired Empty Pick up Depot Address and Pick up date time.

As noted above, Customers provide haulage details for each equipment group specified and indicate haulage arrangements requested for the Export and Import sides of a shipment. The example below shows Carrier haulage at each side and indicates the Ship From Location, the requested empty positioning date at Ship From, requested pick up date at Ship From, as well as the Ship To location.

## **L. Requested Carrier Haulage Details for Multi Stop Bookings, Export Leg**

For unambiguous resolution of multi stop bookings, customers are recommended to use the following conventions when sending data to INTTRA.

By convention, INTTRA expects the sequence in which haulage addresses are sent to match the sequence in which the intermediate stop offs occur on the outbound leg, with the Intermediate Export Stop Off (CL) locations immediately following the Ship From, in order of occurrence.

The following example shows a request for multi stop haulage on the Export leg.

```

DTM+396:201708110900:203
NAD+CL++SECOND STOP LOCATION:SECOND STOP ADDRESS
DTM+396:201708111300:203

```

In Amendments for bookings with multi-stop haulage arrangements, INTTRA recommends that Customers provide all the legs for all equipment groups, even if only one particular haulage address is being changed.

### M. Specifying Controlled Equipment Details

Appendix 4 (Controlled Equipment) in this document contains a comprehensive description of the rules and recommendations for providing controlled equipment information in the IFTMBF message. A few typical use cases are described here.

Customers are recommended to set the header level Controlled Equipment Indicator (GDS) for all Bookings with controlled equipment settings.

```
GDS+14
```

Reefer equipment will always be accompanied by a TMP or HAN segment. The same segments may be sent for equipment qualified as Hybrid, e.g., tanks – see the INTTRA Container Types Listing for equipment types classified as Reefer or Hybrid.

A simple reefer example is given below, followed by a simple example of non-operative reefer equipment.

The following chart lists the more specialized Controlled atmosphere conditions that are supported in the INTTRA IFTMBF message and provides illustrative message fragments. Note these conditions require either Reefer or Hybrid equipment, with a TMP setting.

All segments shown here belong to the EQD Segment Group. They are listed in the order in which they appear in the message; intervening segments not related to the illustrated control setting are omitted.

#### N. Specifying Shipper owned equipment

When Customers want Carriers to provide Equipment, this will be specified as shown in the request below:

EQD+CN++22G0:102:5:2

Alternatively, Customers Booking requests may be for Shipper Owned Equipment, in which case the Carrier is not required to provide the Equipment. This is specified as shown in the request below:

EQD+CN++22G0:102:5:1

#### O. Customer Specification of Changes

Customers have the option of providing a free text description of changes requested in an Amendment transaction, as shown below

FTX+AES+++REDUCED CONTAINER COUNT FROM 3 TO 2

In addition, INTTRA will also provide a summary of changes to the Booking as detected by INTTRA, as follows:

FTX+ACB+++CONSIGNEE ADDED TO THE BOOKING

#### P. Out of Gauge Dimensions

Customers can provide details of Out of Gauge bookings at the commodity level, or at the container level. If sent, INTTRA recommends that Customers provide Out of Gauge dimensions only at one of these levels.

When providing Out of Gauge details, INTTRA recommends the Customer sends the header level GDS indicator, as shown below.

GDS+5

The actual dimensions at the Outer Pack level for out of gauge commodities can be specified as follows.

GID+1+1:PS:67:6  
DIM+2+MTR:16.764:12.192:6.096

Alternatively, the customer can specify the overhang with respect to equipment dimensions, for Out of Gauge equipment. The following example shows a container with overhang in only the height dimension.

EQD+CN++22U1:102:5+2  
EQN+1:2  
DIM+9+MTR:::19.686

## Q. Requesting Per Container Release Handling

INTTRA has provided a flag that the customer can use to request per container release handling, i.e., that a unique release number should be issued for each requested container, preferably under a single booking number.

The per container release handling flag is supported only for multi-container bookings and can only be provided in the request. An example is given below.

```
BGM+335:::INTTRA-Link+98998376:3.8+9+AC
```

## R. Booking Requests with Booking Numbers

Carriers may receive new booking requests with booking numbers under two circumstances. In the first, the customer has been issued a set of booking numbers and is authorized by the carrier to supply those numbers with their requests. This is known as the SMBN (Shipper Managed Booking Number) program at INTTRA. In the second, INTTRA assigns a 'Reservation Number' from a list of reservation numbers provided by the carrier and authorized for assignment to all bookings or to bookings originating from certain locations or customers or a combination of both.

In either case, the value is provided as a 'BN' qualified reference as shown below.

```
BGM+335:::INTTRA-Link+ INTTRA_REF123:3.8+9
RFF+BN:12209989
```

Carriers can supersede these booking numbers provided by Customers. Customers cannot change Booking Numbers on Amendments or Cancellations.

## S. Send LCL Booking Request to NVO Carrier

Customers will designate NVO company as carrier in the booking request in the party segment. They will indicate that booking is LCL in the header level service type. Specification of charges is optional. See appendix F.

```

## T. Minimum Customer New Request

The example below shows the minimum information required by INTTRA on a Customer new booking request and amendment, for a simple dry booking. INTTRA requires the same set of minimum data to successfully process new booking request and amendment transactions.

```
BGM+335:::INTTRA-Link+INTTRA_REF:3.8+9

GID+1+3400:CT:67:6
EQD+CN++45G0:102:5
EQN+3:2

```

Instead of providing ETD at Place of Receipt as shown in the example above, the minimum data requirements for a Customer new booking request or amendment may also be met by any one of ETA at Place of Delivery, or Vessel name (or Lloyd's code) and Voyage (both sent in same TDT main-carriage segment), as described in Section 3 (Requested Routing & Haulage Service Arrangement) of this document.

Also, instead of providing an INTTRA registered Shipper as shown in the example above, the minimum data requirements for a new booking request or amendment may also be met by providing an INTTRA registered Forwarder.

## U. Minimum Cancellation

INTTRA only processes transaction identifiers, and Customer comments on Cancellations. All other data on a Cancellation is ignored by INTTRA. A Cancellation with the minimum (required) information is shown below.

```

Note that INTTRA also recommends that customers provide a comment with a cancellation transaction. An example is shown below.

## XII. Appendix 2 – GID Conventions

This appendix describes the processing of the commodity information provided in the GID (Goods Item Detail) Segment Group.

The Glossary defines terms used in the discussion of the GID Segment group.

The Association section describes INTTRA's interpretation of association between GID segments and the segments that describe the GID, for the two styles of GID presentation supported by INTTRA. Associated segments include:

PIA: Goods Classification (PIA)  
FTX: Goods Description, Customs Declaration Information  
MEA: Measurements associated with the Goods (MEA)  
DIM: Dimensions for Out of Gauge Commodities  
RFF: References associated with the Goods  
GID/SGP: Goods / Container relationships  
MEA: Measurements associated with Goods in Containers  
DGS and associated segments: Dangerous Goods Details

Customers can provide data in either style, whereas Carriers will receive messages only in a single style, the “vertical” style, with each level of packaging individually broken out. The examples in this section show both styles of inbound messages from Customers and the corresponding outbound messages generated by INTTRA in each case to the Carrier, further clarifying the association of detail segments within the GID structure.

The Rules section addresses the minimum requirements for valid GID on the Customer transaction inbound to INTTRA. Customer messages that do not conform to the rules established in this section will be failed by INTTRA.

The Conventions section provides guidelines for minimizing ambiguity in the handling of cargo line items. These guidelines are not enforced by INTTRA, but Customer conformance with the guidelines will result in consistent and correct interpretation of information.

## A. GID Segment Group Structure and Glossary of Terms

Term	Definition
GID Set	<p>One or more GID Segments with the same Sequence Number. The three GID segments in Example 1 constitute a GID Set as do the 5 GID segments in Example 2. Example 3 shows 2 distinct GID Sets. Leftmost Composite	The first populated C213 Composite reading a GID segment from the Left.
Rightmost Composite	The last populated C213 Composite reading a GID segment from the Left. NOTE: the same composite in a GID can be both the rightmost and the leftmost if only one composite in a GID is populated.

## B. Association of Detail Segments

1. GID/SGP segments apply only to outer pack composites.
2. DIM segments apply only to outer pack composites.
3. PIA segments apply to the leftmost populated composite in the associated GID Line.
4. GID MEA segments apply to the leftmost populated composite in the associated GID Line.
5. RFF segments apply to the leftmost populated composite in the associated GID Line.

6. FTX segments apply to the leftmost populated composite in the associated GID Line.
7. DGS details are associated with the rightmost populated composite in the associated GID Line.

In Example B.1, the GID level PIA, FTX, MEA, RFF and SGP detail segments are associated with the outer composite (leftmost populated composite, '20:CR:67:6:CRATE'). The GID MEA segment describes the gross weight of the commodity, including the crates. The package count in the SGP segment is the count of Crates in the container, not the count of Boxes or Cylinders. The DGS and its associated FTX, CTA, COM, MEA, SGP and SGP/MEA segments, on the other hand, are associated with the inner-inner pack (rightmost composite, '180:CY:67:6:CYLINDER').

While processing the inbound message, INTRA will convert GID's with multiple composites to a set of GID Lines, each with a single populated composite so that there is no ambiguity in the association of detail segments. This association is reflected in the example, B.2 which is the Outbound message corresponding to the Inbound message in example B.1.

The Association logic dictates that, in a 3-level GID, to provide any details for the middle level, a Sub Item GID Line must be provided – viz., a vertical GID structure has to be used in order to provide any details for the middle level. Similarly, a vertical GID structure will have to be used if there is a requirement to provide commodity descriptions at any level other than the Outer pack. This is illustrated in example B.3 below for Dangerous Goods, showing a different description (GID/FTX) at each pack level, outer, inner and inner-inner.

#### C. GID Rules

1. A new GID Sequence Number is required for every outer pack composite. The outer composite cannot be repeated within a GID set.
2. Every GID Set must include an outer pack composite.
3. There can be at most 999 C213 Pack composites in a Booking transaction, across all GID Sets.
4. DIM segments can only appear at the Outer pack level.
5. GID/SGP segments can only appear at the Outer pack level.
6. If GID/SGP is sent, it must be sent for every Outer pack composite.
7. A container may only be referenced once per Outer Pack composite within a GID Set, when providing GID/SGP information.
8. Every Container referenced in an outer SGP must have a matching container number in an EQD segment.
9. SGP segments associated with a DGS line cannot introduce a container that has not already been referenced in the SGP segments for the Outer GID.
10. A container may only be referenced once per DGS line, within a GID Set.
11. Package Code or Package Description and Number of Packages must be provided if the commodity is hazardous.
12. Number of Packages must be a whole number greater than zero
13. INTTRA allows for a GID segment to be sent without package code or package description and number of packages (e.g. GID+1, GID+2) but if multiple package levels are sent, the package code or description and number of packages must be provided for all package level.
14. If package code or package description is provided then number of package must also be provided.

15. Package code or package description and number of packages is required for hazardous/hazmat commodity

#### **D. GID Usage Conventions**

1. INTTRA recommends that Customer provide only the Outer pack details for all commodities. For Hazardous commodities, inner and inner-inner pack level details may be provided if there are multiple dangerous goods in the Outer pack.
2. Goods Description (FTX 'AAA'), Goods Classification (PIA 'CG' and 'HS'), References related to the cargo item (RFF) should not vary within a GID Set. Only one set of these cargo item details should be provided for a GID set. A GID should not encompass more than one 6 digit HS classification (PIA, 'HS').
3. 'PALLETS' should not be reported as a package type in any GID composite for transactions destined for customs jurisdictions that do not recognize PALLET as a valid package type. Instead, Pallet details should be shown within the Goods Description or as an addendum to the package type description. Note that the gross weight for the Outer GID should include the weight of the pallets.
4. Only one DGS classification should be associated with a cargo line item. Line items encompassing more than one DGS classification should be split.

### XIII. Appendix 3 – Dangerous Goods

Appendix 2 describes the conventions and rules for associating Dangerous goods details using the GID segment group. This Appendix describes how Customers may use the structured fields in the IFTMBF Transaction Set to provide those details, especially the construction of structured free text segments to provide structured information. For a complete list of allowed values and validations at the segment or element level please refer to the body of this Implementation Guide.

The table shows validations that are enforced (ERR) on inbound Customer data, recommendations that are tracked (REC) as a part of Customer Data Quality Improvement initiatives, as well as usage that is recommended but not tracked (USG).

Dangerous Goods Information	EDI Segment, Elements, Qualifiers	Data Validation	ERR / REC / USG

		For Class 1 DGS, INTTRA recommends sending explosive weight in the net net weight.	USG

#### XIV. Appendix 4 – Controlled Equipment

Controlled Equipment settings are specified in the EQD Segment group, under each EQD loop. Settings provided for an EQD loop apply to each piece of equipment individually, and use a mix of structured fields, EQD/TMP, EQD/HAN, EQD/MEA, and coded free text, EQD/FTX.

Controlled equipment may be either Reefer, or Hybrid equipment. The ISO Container Type list maintained by INTTRA contains a list of valid Reefer and Hybrid Equipment types, as well as their equivalent codes at INTTRA. Reefer equipment must be accompanied by set temperature or marked inoperative. Hybrid equipment may function either as controlled equipment or as standard equipment, and correspondingly may or may not be accompanied by control settings. A common example of hybrid equipment is a Tank container, which may or may not have control settings.

The following table summarizes the available settings for controlled equipment, the corresponding EDI segments, validations that are enforced (ERR) on inbound Customer data, and recommendations that are tracked (REC) as a part of Customer Data Quality Improvement initiatives.

Setting	EDI Segment, Elements, Qualifiers	Data Validation	ERR / REC
Equipment Type Code	EQD C224, 8155	Must be a valid ISO code.	ERR
		If container is Reefer type, provide with either NAR or Set temperature	ERR
Non Active Setting	EQD/HAN	Can only be sent with Reefer or Hybrid Equipment	ERR
		Mutually exclusive with Set temperature	ERR
		INTTRA recommends that a single booking not have a mix of NAR and active Controlled Equipment	REC
Set Temperature	EQD/TMP	Can only be sent with Reefer or Hybrid Equipment	ERR
		Mutually exclusive with NAR Setting	ERR
		Set temperature must be the same for all active controlled equipment on a single Booking	ERR
		Provide with Controlled Equipment Indicator	REC
Controlled Equipment Indicator	GDS C703 7085 = 14	Provide for Booking with active controlled equipment	REC
Temperature Control Instructions	EQD/FTX 4451= AEB 4441 must be Null 1 <sup>st</sup> 4440 required 2 <sup>nd</sup> 4440 optional	Only for active reefer/hybrid ( <i>viz.</i> with TMP setting)	ERR
